

IMPROBABLE DESTINIES: FATE, CHANCE, AND THE FUTURE OF EVOLUTION

presented by

JONATHAN LOSOS

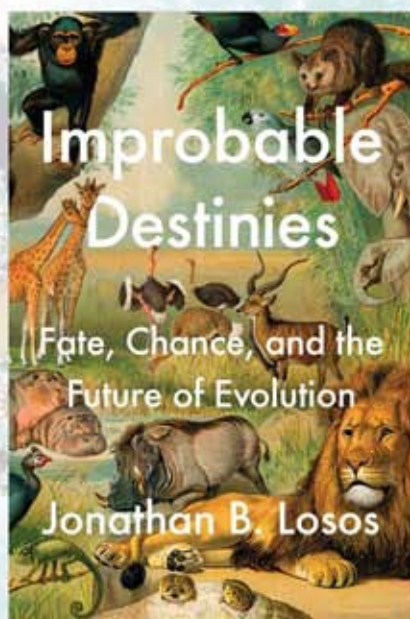

William H. Danforth Distinguished University
Professor, Washington University in St. Louis
Director, Living Earth Collaborative

Thursday, February 15, 7:30 p.m.

Lesar Law Building Auditorium

Reception and book signing immediately following

13th Annual
Darwin Week

Is the diversity of the organisms present on Earth today contingent upon many chance events that will never be repeated, or does natural selection inevitably produce the same evolutionary outcomes? Dr. Losos will illustrate how evolution can be rapid and predictable with many examples, including guppies, fruit flies, bacteria, foxes and his own research group, anole lizards.
